

# MAR-K

## BED STRIPS

Steel material goes through a roll former to create new GM, Ford or Dodge bed strips.

### BED STRIPS

- Bed strips are formed metal strips bolted between the boards in the pickup bed floor.
- **MAR-K** bed strips are roll formed in our manufacturing facility, and available in unpolished stainless and polished stainless for the "chrome" look or in steel which may be painted as original.
- Square holes are punched in the bed strips according to the original pattern.
- Dimensions are 1-1/2" wide, and 18 gage, approximately .048" thickness.
- *Made in Oklahoma City, USA.*
- Bed strips may be ordered without holes and in any length for custom applications. See page 20.
- Also available are bed strips with hidden fasteners. See pages 27-32 for Hidden Bolts bed strips in stainless, steel and aluminum and the "no bolts" bed wood.

**Stainless Steel:** Bed strips, angle strips, and stainless mouldings are made of type 430 bright stainless steel, selected because of its color. It is a magnetic grade of stainless formulated for automotive stainless steel trim. When it is polished and buffed, its bright color looks similar to chrome plating. Stainless hardware items such as bolts, nuts, tailgate chain parts, and bed-to-frame washers are made of nonmagnetic stainless selected for superior resistance to rust and corrosion.

**Care of stainless / Rusting** - With proper care, stainless steel will remain bright and smooth for long periods of time. It may be cleaned with liquid polish intended for stainless or chrome. DO NOT use steel wool, a steel wire brush, or a buffing wheel which has been used on steel or other metals. Bright stainless parts should be coated with a good nonabrasive wax for maximum protection. Stainless steel will rust or corrode under certain conditions, especially when contaminants such as salt water, battery acid, or steel particles and moisture are present. Frequent washing and waxing are a great protection for stainless steel surfaces.

**CUSTOM BED STRIPS** - Good news if you have a flat bed truck, steel bed floor, or any other vehicle that did not have a standard pattern for strips and wood. We can make bed strips to your specifications.

**MAR-K** can help you design your custom bed strips. We can supply any length strips with or without square holes according to your special pattern. Strips are 1.50" wide and can be made in any length. The flat area in the center of the strips is .70" wide, which is large enough for a 5/16 carriage bolt head. The rolled edges are .25" tall. We generally recommend approximately 12" to 15" bolt spacing to minimize distortion. When bolting strips to an existing truck bed, be sure to avoid specifying hole locations that would interfere with structure on the under side of the bed floor. Please fill out the bed strip data sheet on page 59, and we will custom fit your bed!

We do not punch round holes in bed strips. If you choose to drill your own round holes at the time of assembly, the bed strips may be attached with ribbed neck carriage bolts or other screws having a head diameter less than 3/4". Refer to pages 34-35 for stainless or steel fasteners to attach your bed strips.

### FORD AND DODGE OWNERS

The shape of **MAR-K** bed strips is very similar to that used in GM pickups. Ford and Dodge trucks had a slightly different shape. The **MAR-K** bed strips may be used on any pickup bed, but when replacing strips in a Ford or Dodge all the strips in the bed should be replaced so they all have the same appearance. See page 20 for parts and prices.

### Tech Tip: GM 67-87 TRUCKS

The front hole of each bed strip in '67 and newer GM trucks is 5/16" square and the remaining holes are 1/4". When installing strips in these models be sure to use the correct bolt size at each hole location so the bolt kit quantity will be correct.

### Tech Tip: FORD 83-87

The Ford 83-87 short bed flareside has a wood bed floor that is a large piece of wood with five (5) metal strips bolted down to it. For these trucks, we manufacture a set of seven (7) boards, and six (6) strips, similar to the 76-82 model Fords. That is why you see the quantity of six (6) strips for this series of truck.
