

Rear Pans are formed in this press brake. Custom tools needed to make parts are designed and built at MAR-K.

54-87 GM STEPSIDE SMOOTH WITH BOX

WHY MAR-K? The MAR-K Stepside steel rear pan is unique in that it mounts up on the face of the rear cross sill, instead of beneath it. This makes our pan align with the tailgate instead of the rear sill. MAR-K designed this rear pan to look the best on custom Stepside trucks.

Louvres: All louvres will line up with those in tailgates and tailgate covers. The louvres are 4" wide and have 6" center spacing (6" measuring horizontally from the center of one louvre to the center of the next).

REAR ROLL PANS -

- SMOOTH your truck with a **MAR-K** steel rear roll pan. The rear pan takes the place of the back bumper for a smooth effect.
- **MAR-K** has manufactured top quality roll pans for many years, and the attention to detail is what puts ours above the rest.
- Our pans are made from 18 gage electro-galvanized steel for rust prevention, and the pans will bolt or weld on depending on your desired look.
- We pre-drill the mounting holes in the pans, and a 'bolt-on' hardware kit is included at no extra charge.
- Our pans are available with or without a license tag indentation (tag box), and louvres are available as well.
- Rear pans are available for many GM, Ford and Dodge trucks.
- Made by **MAR-K** in Oklahoma City, USA!

TECH TIP: REAR CROSS SILL MODIFICATION -

The installation of a **MAR-K** steel rear pan with license indentation requires modification to the rear cross sill.

Since the "tag box" is indented, a space will need to be cut in the rear cross sill for clearance. The rear pan with a tag box will not fit properly unless this is done. Instructions are included with the rear pan.

58-66 FLEETSIDE REAR PANS MUST BE WELDED ON.

TECH TIP: BOLT-ON VS WELD-ON

Installation of rear pans can be done in different ways. Most rear pans bolt to the rear cross sill, and then it is optional as to whether or not you take the customization that step further and weld the seams shut for a completely smooth look. You can see the difference in the looks; either way, they look smooth and sweet! Complete instructions are included.

FOR 88-98 GM SPORTSIDES

Exclusively aMAR-K design: The Sportside steel rear pan with exhaust outlets. This innovative design takes advantage of the factory cut out portion of the bed with a symmetrically cut out portion of the roll pan for a perfect exhaust outlet. Chrome exhaust tips can be used with your modified exhaust system for a new look that is very simple to achieve! As always, this pan is made of quality 18 gage steel and comes with step by step bolt-on instructions. Bolt-on hardware included at no additional charge. Spare tire relocator is needed for best results.

License Tag Lights, License Frame Back Plate and Flip-up Licence Plate are all available on page 71.

FRONT ROLL PAN - The front pan is a MAR-K specialty part. Constructed of 18-gage steel, this pan takes the place of the front bumper for a slick smooth look. The front extensions of the truck frame must be shortened approximately 2" before installation. The cutting of the frame should be performed by someone experienced with welding or cutting. Assembly instructions are included with each front pan. Be sure to check with your local and state laws concerning legal requirements for front pans and license plates. *Made in Oklahoma City, USA!*

53-56 FORD FULL HEIGHT REAR PANS

The "full height" rear pans for 53-56 Ford Short bed Flareside (stepside) trucks are for those customers who prefer a larger, taller pan. The "Full Height" pan is about 2" taller than our standard pan and extends down and forward to completely fill the space below the bed sides between the rear fenders. It may be installed without cutting the rear sill as the optional taillights and recessed license plate are below the rear sill. Available smooth or with louvres. Smooth with box pictured above.

*These Rear Pans are not made to fit NARROW BED/SPLASH.

LOUVRES: All louvres will line up with those in tailgates and tailgate covers. The louvres are 4" wide and have 6" center spacing (6" measuring horizontally from the center of one louvre to the center of the next).

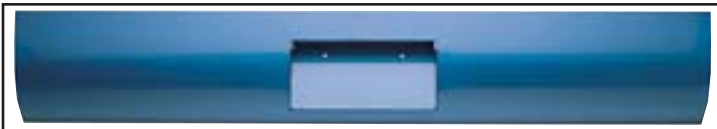

MAR-K's rear pans with louvres are made to line up with the louvre pattern in our tailgates and tailgate covers for a great custom look!

See pages 72-73 for tailgate covers and weld-ins.

The license tag indentation or "box" is being made on this rear pan by punching the hole and bending the area below it to make room for the tag box to be welded on.

License Tag Lights

Made to fit in the tag indentation of a **MAR-K** steel rear pan, the lights are 12 volt, and include lens, bezels, sockets, bulbs and wiring.

Some early model pickups had a 6-volt bulb originally, and these electrical systems will not support this tag light. These tag lights do not work well with flip-up license plates. These are made by an outside vendor.

100865	LICENSE TAG LIGHTS	\$50.00 pr
--------	--------------------------	------------

TECH TIP: GENERAL REAR PAN INSTALLATION

The first step is to remove the bumper and brackets. Hold the pan up in the space between the bed sides and determine placement. Be sure to check that the tailgate will open and shut to your satisfaction before securing the pan to the rear sill. Holes are predrilled in the pans for help in bolting it to the sill. If you are planning to weld the seams, (some models will require this) tack weld each end. Check the alignment before completely welding the seam. Fill the welded seams with body filler or lead, and grind seam to the body contour. If you are bolting the pan at the seams, brackets are included for attachment to the bed side. Complete instructions including measurements and other helpful hints are included with all pans.

THESE MAKE YOUR TAG FRAME WORK BETTER!

FLIP-UP LICENSE PLATE

Designed to work with a hidden hitch and **MAR-K** rear pans. It allows the license plate to be rotated up out of the way when using the hidden hitch receiver.

500126	FLIP UP PLATE	\$48.00 ea
--------	---------------------	------------

BACK PLATE

Designed to work with **MAR-K** license plate frames, the back plate covers up the back part of your license plate when it hangs down below your truck.
