## TAILGATE CHAIN PARTS

### TAILGATE CHAIN ASSEMBLIES

- These are used on GM, Ford and Dodge Stepsides

and early GM Fleetside trucks as a method of opening and closing the tailgate. **MAR-K** makes chains in zinc plated steel and polished stainless steel in Oklahoma City, USA

**51-87 Ford Flareside Chains** - The 51-52 chains include an elongated link, eyebolt, hook and chain cover. The eyebolt attaches to the top portion of rear stake pocket (nut included). The elongated link is attached to the eyebolt. When tailgate

is closed, the elongated link goes over the latch bracket on the tailgate and the hook goes through the latch bracket to keep the chain latched. The 53-87 chains (shown) include the eyebolt, bracket, hook, bumper pad and chain cover. The eyebolt attaches to the top portion of the rear stake pocket (nut is included). The bracket is attached to the eyebolt. When the tailgate is closed, the hook goes through the bracket on the tailgate to keep the chain latched. Chains are available in polished stainless and original zinc plated steel.
